(54) Title: WIRELESS E-MAIL SYSTEM AND METHOD FOR USING SAME

/076812 A1 Ⅲ (57) Abstract: A wireless e-mail system and method is disclosed. The system comprises a wireless mobile device comprising an e-mail client, an e-mail server, a gateway, a mobile network interconnecting the wireless mobile device and the gateway, and a broadband network interconnecting the gateway and the e-mail server. When the client transmits a single self-contained request to the gateway via the mobile network to retrieve a set of e-mail related information from the e- mail server, the gateway retrieves at least the e-mail related information from the e-mail server via the broadband network using a plurality of transactions, compiles the retrieved information into a single self contained response and transmits the single response via the mobile network to the e-mail client.
